

Cabin Filter Fitment - General Guidelines.

INSTALLATION GUIDELINES FOR AN ACDELCO CABIN FILTER*

Example of AC Delco Cabin Filter

1. Always wear appropriate Personal Protective Equipment (eyes, skin, respiratory).
2. Locate the vehicle's cabin filter: It is usually situated behind the glove compartment, behind the dash or inside the engine bay against the firewall.
3. Open the cabin filter housing using appropriate tools if required.
4. Carefully remove the old cabin filter from its housing. Depending on the vehicle, you may need to remove additional tabs/retainers holding the filter in place. Ensure not to shake any dust or allergens loose.
5. Install the new cabin filter, ensuring it is mounted securely inside the housing.
6. Install the cabin filter housing using the reverse method of removal.

*Cabin filter removal and installation can differ greatly between vehicles, so you must refer to your vehicle Manufacturer's service manual for vehicle specific instructions.
