

Fuel Filter Fitment - General Guidelines.

INSTALLATION GUIDELINES FOR AN ACDELCO IN-LINE FUEL FILTER*

Example of ACDelco In-Line Fuel Filter

1. Always wear appropriate Personal Protective Equipment (eyes, skin, respiratory).
2. Locate the vehicle's fuel filter. It is usually found beneath the vehicle close to the fuel tank.
3. De-pressurise the fuel system using vehicle Manufacturer's recommendations.
4. Disconnect the battery to in accordance with vehicle Manufacturer's recommendations to minimise the risk of electrical sparks.
5. Remove the filter from its mountings using appropriate tools.
6. Disconnect fuel lines using vehicle Manufacturer's recommendations. Use a drip container to minimise spills. Wipe away spilled fuel to minimise health/fire hazards.
7. Attach the new fuel filter ensuring its position corresponds to the direction of flow. This is indicated by an arrow or "inlet/outlet" stamped on the filter itself.
8. Install mountings using the reverse method of removal.
9. Reconnect the battery to in accordance with vehicle Manufacturer's recommendations.
10. Ensure the fuel system has fully primed in accordance with your vehicle Manufacturer's recommendations before starting the engine. Start engine and check for leaks.

*Fuel filter removal and installation can differ greatly between vehicles, so you must refer to your vehicle Manufacturer's service manual for vehicle specific instructions.
